

TACIT

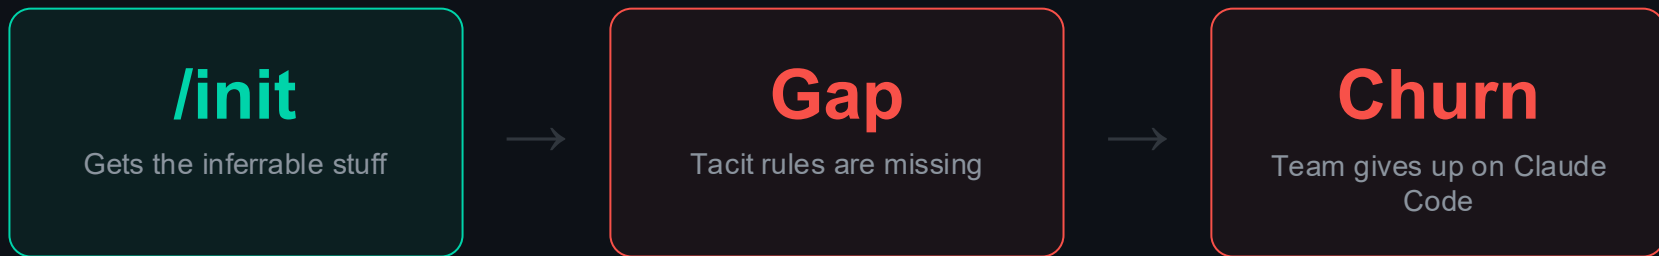

Extract team knowledge
from PR reviews

Built with Claude Agent SDK and Opus 4.6

The Adoption Cliff

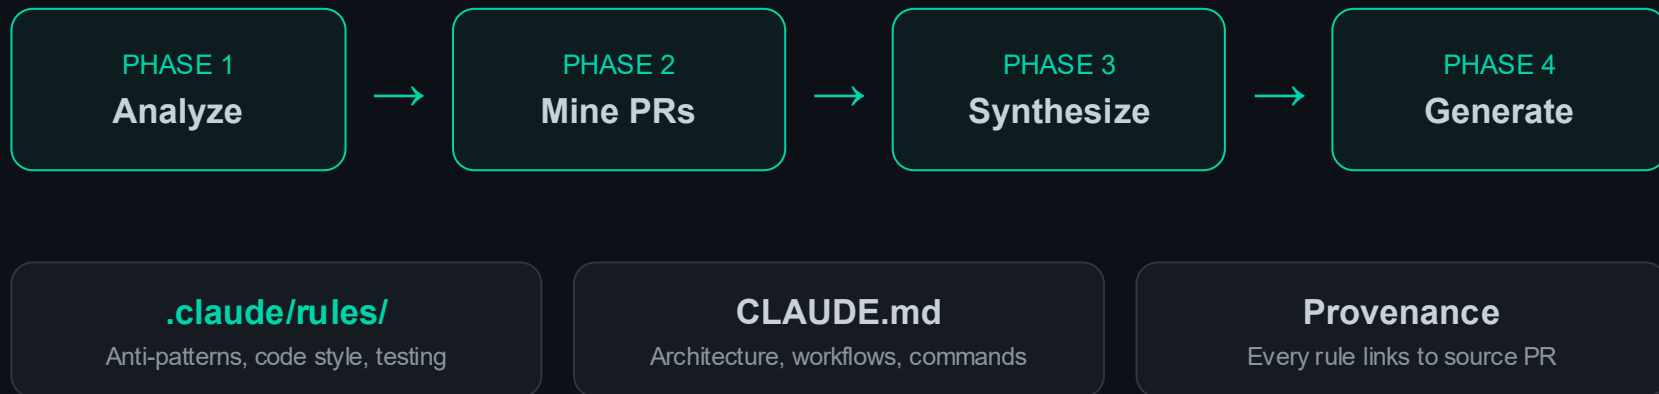

Claude Code is incredible — if you've invested in your CLAUDE.md

But that knowledge **is** expressed — in PR reviews.

How Tacit Works

16 agents mine your repo history — output follows Claude Code's memory hierarchy

DEMO

Every Rule Has a Story

Full provenance — trace any rule back to its source PR

PR #15715 — Reviewer comment:

"This creates conflicting lockfiles. Remove package-lock.json."

EXTRACTED RULE

NEVER commit package-lock.json — this project uses pnpm

No human wrote this rule. Tacit read the review and extracted it.

Results: 8 OSS Repos + Private Teams

783

Rules extracted

54%

Novel discoveries

44

Anti-patterns

98%

With provenance

vercel/next.js

denoland/deno

anthropics/claude-code

anthropics/sdk-python

langchain-ai/langchain

prisma/prisma

facebook/react

openclaw/openclaw

+ *private repos*

54% of rules are **novel** — conventions teams enforce in reviews but never documented

You Shouldn't Have to Write It

Your team already said it in their PR reviews

`/init` handles the inferrable.
`tacit` handles the tacit.
